

Automatic Prescription Discount

Giving employees easy access to more savings

At CDPHP®, our automatic prescription discount program provides seamless savings at the register for commercial members who would otherwise pay 100% out of pocket at full-retail cost on prescriptions for benefit-excluded medications and over-the-counter remedies.

Included at no additional cost for fully insured and self-funded groups, the program enables members to pay the lowest price possible for these medications at in-network retail pharmacies and Express Scripts Pharmacy, without enrollment or membership fees. It also enables more complete health and safety checks since the health plan is able to retain visibility of claims that would otherwise reject.

Savings in 3 simple steps

- 1** Members give a valid prescription to a CDPHP network pharmacy, just like they do today.
- 2** The medication is adjudicated under the plan, but is plan excluded. If the prescription is eligible under the discount program, the claim does not reject, minimizing disruption.
- 3** The cost of the prescription is automatically discounted at the point of sale and the member seamlessly pays a reduced cost at the pharmacy.

Program facts

- ▶ The automatic prescription discount program provides savings on prescriptions for a wide range of benefit-excluded medications and over-the-counter remedies, like vitamins, gastrointestinal medications, antihistamines, lifestyle drugs, and electrolyte/caloric/H2O products.
- ▶ The following are excluded: compounds, vaccines, controlled substances, specialty products, any drugs with plan coverage limitations, certain unit dose packaging, and certain clinical exclusions.
- ▶ Automatic prescription discount program claims process separately from the prescription plan so that they do not have any impact on drug trend or financials. Any amount paid does not apply toward plan deductibles or maximums.
